

# Nassim Sai

## Network & Cloud Security Engineer

Tunis, Tunisia | +216 55 870 738 | saynassim12@gmail.com | linkedin.com/in/nassim-sai | github.com/nassim-sai

French and English working proficiency • requires Canadian work authorization • open to employer-supported Global Talent Stream / LMIA

### SUMMARY

Network and cloud security engineer with a five-year engineering degree in computer systems and network security. I build defensive infrastructure and then instrument it: segmented enterprise networks behind redundant firewalls, NOC/SOC stacks on Wazuh, Suricata and ELK, and a six-service machine-learning security observability platform for OpenShift shipped as a graduating engineering project in industry.

### TECHNICAL SKILLS

|                        |                                                                                                                                                      |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| Network Security       | Cisco IOS • pfSense • FortiGate • VLAN segmentation • OpenVPN, IPsec, MPLS VPN • OSPF, BGP • firewall policy design • NAC • DNS                      |
| Cloud & Detection      | Kubernetes • OpenShift 4 • NetworkPolicy • Kyverno • Docker • SIEM operations • Wazuh • Suricata • Snort • ELK • Grafana • Prometheus • MITRE ATT&CK |
| Systems & Programming  | Windows Server • Active Directory • FreeRADIUS • Linux hardening • VMware • GNS3 • Python (FastAPI, scikit-learn) • C++ • Java • PostgreSQL          |
| Governance & Languages | ISO/IEC 27001 ISMS, logging and traceability design • <b>French and English (working proficiency)</b> , Arabic (native)                              |

### EXPERIENCE

**Network & Security Engineer — Graduating Engineering Internship** Jan 2026 – May 2026  
NextStep IT | Tunis, Tunisia — hybrid

- Designed and shipped the **NetworkPolicy Intelligence System**, a **six-service** security observability platform for OpenShift/Kubernetes, delivered in partnership with TEK-UP University.
- Built the detection pipeline end to end: OVN-Kubernetes ACL drop logs → Fluent Bit/Loki → flow baselining → three-tier anomaly detection → FastAPI REST/SSE → React dashboard.
- Automated NetworkPolicy compliance auditing against an **8-rule** catalogue, replacing manual YAML review with per-namespace scores graded **A-F**, and kept all model inference on-cluster so **zero customer data left the perimeter** — **3.8 s** to first token on CPU-only hardware.

**Network Security Intern** Jun 2025 – Jul 2025  
Tunisie Telecom | Tunis, Tunisia — hybrid

- Designed and deployed a segmented enterprise network — **5 VLANs** behind a **redundant high-availability pfSense firewall pair** — plus site-to-site OpenVPN tunnels linking head office to a branch.
- Integrated Suricata IDS with an ELK correlation stack and a Zabbix network operations centre dashboard monitoring **12+ critical hosts** with severity-classified alerting; deployed Windows Server Active Directory for centralized authentication.

**IoT Systems Intern** Feb 2023 – Jul 2023  
Compagnie des Phosphates de Gafsa | Gafsa, Tunisia — built a real-time industrial weighing and traceability system on Raspberry Pi with SIM808 cellular backhaul, streaming to ThingsBoard

### PROJECTS

**NetworkPolicy Intelligence System — flagship** [nassim-sai/netpol-intelligence](#) 2026  
Six microservices on OpenShift 4.21 — Fluent Bit/Loki collection, Welford flow baselining, Z-score and Isolation Forest detection, live policy audit, on-cluster LLM, React 18 dashboard on TimescaleDB.

**Secure NOC & VPN Infrastructure** [nassim-sai/Secure-NOC-VPN-Infrastructure](#) 2025-2026  
Enterprise telecom architecture: HA pfSense pair, five-VLAN segmentation, encrypted inter-site tunnels, IDS-to-SIEM correlation, supervised NOC dashboard.

**ISMS Security Architecture — NAC, Central Logging & ERP Hardening** [nassim-sai/Secure-Network-Project](#) 2025  
ISO/IEC 27001-aligned: identity-based NAC, FreeRADIUS/AD authentication, Wazuh SIEM analysis, hardened containerized ERP. Also built: an open-source NOC (NOC\_Project) and a Raspberry Pi security appliance (Secure-Portable-Router).

### EDUCATION & CERTIFICATIONS

|                     |                                                                                                                                      |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| Sep 2023 – Jul 2026 | <b>Engineering Degree (5-year) — Security of Computer Systems and Networks</b> • TEK-UP University of Digital Sciences, Tunis        |
| Sep 2020 – Jul 2023 | <b>Bachelor's Degree — Electronics, Electrical Engineering &amp; Automation</b> • ISIMM, Monastir                                    |
| Certified (2026)    | Fortinet NSE 1, NSE 2, NSE 3 • Cisco Introduction to Cybersecurity • Cisco Networking Basics • AWS Foundations of Prompt Engineering |
| In progress         | Cisco Junior Cybersecurity Analyst (CCNA + CyberOps) • Microsoft SC-900 • Azure security • Fortinet FortiGate Administrator (NSE 4)  |
